# InDesign Gutter Margin Preview

InDesign PDFs may display a sliver of the adjoining page in the gutter margin.
This may look odd in proofs, but files will print as built.
Settings can be modified to remove this feature.
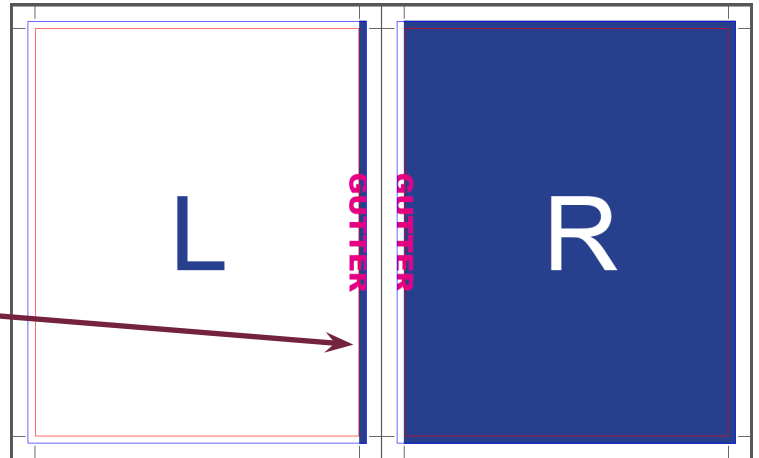

InDesign Spread Sample

Set up as **Facing Pages** in **Document Setup**

Left hand page is blank

Right hand page has a solid blue background

PDF Two Page Spread View - Default Settings

InDesign **Export > Marks and Bleed** settings for print may include *a sliver of the adjoining page* to indicate how the spread pages line up
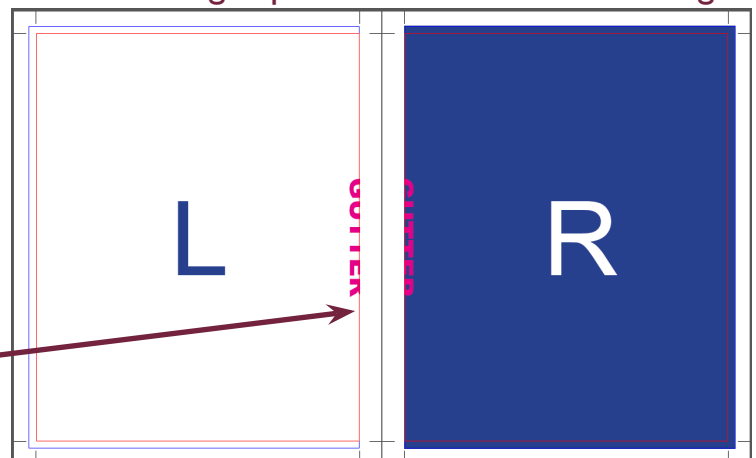

Modified InDesign Export Bleed Settings

To omit the gutter margin preview:

Under **Export > Marks and Bleeds** tab,
Bleed settings *must* be unlinked and then
Inside bleed margin set to zero

PDF Two Page Spread View - Modified Settings

Modified settings maintain bleed on all outer margins

The gutter margin is now flush with final trim
